
FABRIC KIT / 8 x 8 INCHES

Sea Turtle

Your six-step assembly guide

Build a peaceful turtle picture by tucking fabric into the grooves. No sewing needed.

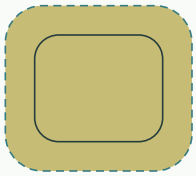
Gather: your pre-grooved foam, supplied fabrics and color reference, plus small scissors and a blunt fabric-tucking tool.

1 Sort & plan

Lay the foam flat. Match the blue and aqua fabrics to the water. Set aside green fabrics for the head, flippers and tail, and olive and gold-green fabrics for the shell.

Match the colors

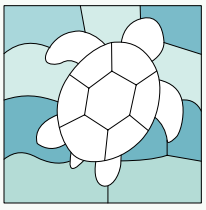
2 Trim one piece



Lay fabric over its section. Trim around it, leaving about **1/4 inch (6 mm) extra** on every side for tucking. Start generous and trim more only if needed.

Leave extra for tucking

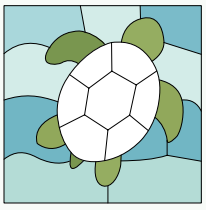
3 Fill the water



Start with the large water sections. Hold each fabric piece smooth and gently tuck the edges into the grooves with a **blunt tool**. Work a little at a time on opposite sides. Do not stretch.

Water first

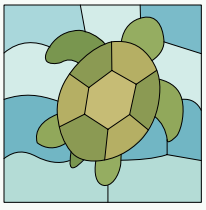
4 Add the turtle



Cover the head, four flippers and small tail with the green fabrics. Smooth from the middle outward. Around curves and narrow ends, tuck small amounts and trim bulky excess carefully.

Add the greens

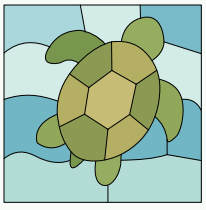
5 Fill the shell



Cover the six outer shell sections, alternating olive and gold-green as shown. Finish with the lighter center section. Tuck both neighboring fabric edges into their shared groove, keeping the joins neat.

Complete the shell

6 Neaten & finish



Check every groove and tuck in loose threads and edges, including the outside border. Lift and reset any loose edge. Replace a piece cut too small. Brush away scraps and display your turtle.

Finished picture

Helpful tip: If a groove feels crowded, lift the fabric and trim a little of the hidden allowance. Use gentle pressure; never force the tool or cut through the foam.
